

Retrospect Backup for Mac

Data Protection for Businesses

NEW Retrospect Backup 17: Automatic Onboarding, Nexsan E-Series/Unity Certification, 10x Faster ProactiveAI, Restore Preflight

Retrospect Backup protects over 100 Petabytes in over 500,000 homes and businesses in over 100 countries. With broad platform and application support, Retrospect protects every part of your computer environment, on-site and in the cloud. Start your first backup with one click.

Complete Data Protection

With cross platform support for Windows, Mac, and Linux, Retrospect offers business backup with system recovery, local backup, long-term retention, along with centralized management, end-to-end security, email protection, and extensive customization—all at an affordable price for a small business.

Cloud Backup

Theft and disaster have always been important reasons for offsite backups, but now, ransomware is the most powerful. Ransomware will encrypt the file share just like any other file. Retrospect integrates with over a dozen cloud storage providers for offsite backups, connects securely to prevent access from malware and ransomware, and lets you transfer local backups to it in a couple clicks.

Full System Recovery

Systems need the same level of protection as individual files. It takes days to recreate an operating system from scratch, with specific operating system versions, system state, application installations and settings, and user preferences. Retrospect does full system backup and recovery for your entire environment.

File and System Migration

Retrospect offers built-in migration for files, folders, or entire bootable systems, including extended attributes and ACLs, with extensive options for which files to replace if source and destination overlap. Every file is an exact clone, down to the byte.

“I have had to work with just about every other product on the market. Retrospect beats them all hands down.”
